Activity #1 - Variables

PART A- Variable Identification Table

Variable Name	Data type	Variable type	Stored In
name	String	Instance	Heap
grade	int	Instance	Heap
n	String	Local Parameter	parameter
g	int	Local Parameter	Parameter
s1	Student	Local	Stack
s2	Student	Local	Stack
s3	Student	Local	Stack

PART B:

STATEMENT	WHAT HAPPENS	MEMORY IMPACT
main (String[] args)	Program starts and main method runs	Strack frame created; args reference (Started) stored
Student s1 = new Student("John", 85);	Creates first Student Object	Heap : Obj 1 created (John, 85); Stack : s1 -> Obj 1
Student s2 = new Student("Maria", 90);	Creates second Student Object	Heap : Obj 2 created (Maria, 90); Stack : s2 -> Obj 2
Student s3 = s2;	Copies reference of s2 into s3	Stack : s3 -> Obj 2; no new heap
s1.grade = 95;	Updates grade of object referenced by s1	Heap: Obj 1.grade changes 85 -> 95
s3.name = "Ana";	Updates name of object referenced by s3	Heap: Obj 2.name change Maria -> Ana
System.out.println(s1.name + " " + s1.grade);	Prints values of Obj 1	No memory chang
System.out.println(s2.name + " " + s2.grade);	Prints values of Obj 2	No memory change
System.out.println(s3.name + " " + s3.grade);	Prints values of Obj 2	No memory change
End of main	Method finishes
