Midterm Seatwork #3 - Basic ATM SYSTEM

```
import java.util.Scanner;

public class ATMTransactionCounterChacon
    public static void main (String[] args) {
        Scanner input = new Scanner (System.in);
        double balance = 8000.0;          //Requirement #2
        int transactionCount = 0; // Requirement for counter variable
        int choice = 0;

        // Requirement: while loop for continous transactions
        while (choice != 4) {
            System.out.println ("===== ATM MENU =====");
            System.out.println ("1. Check Balance");
            System.out.println ("2. Deposit");
            System.out.println ("3. Withdraw");
            System.out.println ("4. Exit");
            System.out.print ("Choice: ");
            choice = input.nextInt();

        // Requirement: Switch case
        switch(choice) {
            case 1:
                transactionCount++;
                System.out.println ("Balance: " + balance);
                break;
```

```
case 2:
    transactionCount++;
    System.out.print("Deposit: ");
    double depositAmt = input.nextDouble();
    balance += depositAmt;
    System.out.println("New Balance = " + balance);
    break;

case 3:
    transactionCount++;
    System.out.print("Withdraw : ");
    double withdrawAmt = input.nextDouble();

    if(withdrawAmt > 2000) {
      System.out.println("Exceeds maximum withdrawal");
    }else if (withdrawAmt > balance) {
      System.out.println("Insufficient funds");
    } else {
        balance -= withdrawAmt;
        System.out.println("New balance = " + balance);
    }
    break;

case 4:
    System.out.println("Transaction Count: " + transactionCount);
    System.out.println("Exit system. Thans - Chacon ATM");
    break;
default: system.out.println("Invalid Choice. Try again.");
} System.out.println();
  }
 }
}
```

Sample Execution:

// Transaction 1

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Choice: 1

Balance = 8000.0

// Transaction 2

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Choice : 2

Deposit : 3000

New Balance = 11000.0

// Transaction 3

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Choice : 3

Withdraw : 5000

Exceeds maximum withdrawal

Explanation

The while loop keeps the program running in a circle so you can do many transactions without the app closing. The switch-case works like a remote control that picks which part of the code to run based on the number you type. Finally, the if-else checks two important rules before giving you money: it makes sure you don't withdraw more than 2,000 and that you actually have enough money in your balance.
